Malmö, 2022-04-08

I love to work. I love discovering and learning new things, puzzling with problems to find solutions and I really don't like to sit idle – please contact me, if you have any possibility of employing me. I enjoy speed, structure and programming, both individually or as part of a team. I am very social and communicative and easy to get along with. Furthermore, I like documenting processes and writing instruction manuals/handbooks.

I am used to working in a laboratory environment and developing and documenting the processes. Being very well trained in various laboratory methods and techniques, I am able to establish workflows and protocols with a high standard of quality control, where clear communication, detailed information and documentation is key. I enjoy working both in a group and by myself, depending on the needs of the moment. I have experience in leading teams of international scientists to a common scientific goal and enjoy the cooperation and structuring of said processes, including its documentation. Besides academic work, I am used to building equipment - from sewing insect nets to building wooden structures. Further, I have been working with tourists, as a nature tour and museum guide. I also enjoy cooking and baking, creative works and learning languages.

Having worked in science for over 10 years, I have experience with very diverse tasks. Working very systematically and diligently, I have successfully developed various protocols for my own research. This made me sought after by colleagues, as I possess a large amount of patience, endurance and creativity for the developmental and technical documentation processes including repeatability and quality control, as well as testing out methods with/on colleagues. I enjoy working systematically and in a structured way. Both documenting and teaching my methods to others once developed have been a major part of my work life, I do not shy away from taking the lead. Over the years I have had a number of students and colleagues working with me who have given very positive feedback both on working with and being trained or assisted by me.

Concluding, I can say I am very flexible and have great pleasure in learning new techniques and approaches, which facilitate adapting to a new group and topic. I am happy to commute - about one hour from Malmö is something I consider reasonable (either by public transport or own car).

If you like what you read, consider to have me contribute to your team with my knowledge, but also with my motivational force, enthusiasm, flexibility, cooperativeness, organisational skills and hard work starting as soon as possible.

Thank you for your time and consideration. I look forward to hearing from you.

With kind regards

Berrit Kiehl
